Fulbright scholars

Pasadena, Calif.

Sir:

I have learned that the number of Techmen applying for Fulbright Scholarships declined drastically this year over previous years. I was fortunate enough to have spent last year studying in Germany on such a scholarship, and I sincerely believe that, in failing to apply for these scholarships, Techmen are passing up a truly valuable opportunity.

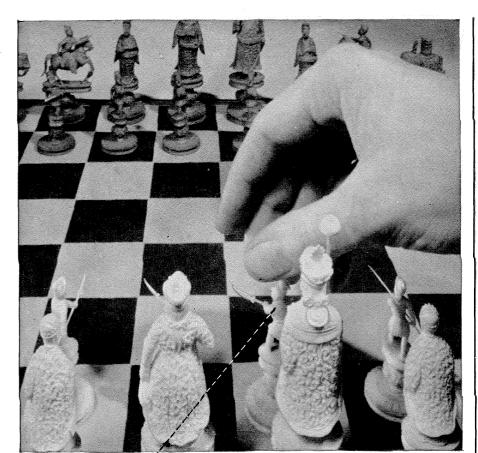

I feel that the year of foreign study offered by the Fulbright program is particularly valuable to a Tech student who has just received his BS for it gives him a year to "recuperate" from the rather strenuous four years of undergraduate work behind him, and a chance to consider fully what sort of graduate work he wishes to undertake.

Of no less importance is the fact that spending a year studying in a foreign country is almost certain to give a reasonably intelligent and open-minded individual a much broader background, both intellectually and culturally. I feel that living among another people, and having the opportunity to compare their basic views and way of life with our own, gave me a better understanding not only of that nation but also of my own.

Since the university system of most European countries is very informal by Tech standards—required courses, problem sets, or tests being very infrequent—you have a great deal of free time to use as you see fit. I personally chose to devote a lot of this time to the cultural activities which I had been postponing for the last four years.

In closing I would like to point out one potential disadvantage in a year of foreign study — namely that, because of the great differences between the European and American university systems, there is very little

# your first move can decide the game your first job can decide your future

That important first job can start you off in the wrong direction—or it can lead you straight toward your goal. If your ambitions are high, Motorola has a place that will give you the finest chance possible for the advancement you want. You'll get security and good salary, but, more important, you'll be working on projects with a future, like missile guidance, radar, and microwave. The door is wide open at Motorola, and the opportunity to fulfill your ambitions is yours.

If you are an ELECTRICAL ENGINEER, MECHANICAL ENGINEER or PHYSICIST, contact Motorola today.

CHICAGO, ILL.: MR. L. B. WRENN, Dept. CO., 4501 Augusta Blvd.

Challenging positions in Two-Way Communications, Microwave, Radar and
Military equipment, Television (Color) and Radio Engineering.

PHOENIX, ARIZ.:

RESEARCH LAB., MR. R. COULTER, Dept. CO., 3102 N. 56th St. SEMI-CONDUCTOR DIV., V. SORENSON, Dept. CO., 5005 E. McDowell Rd. Outstanding opportunities in the development and production of Military equipment and Transistor products.

RIVERSIDE, CAL.: MR. C. KOZIOL, Dept. CO., Box 2072

This new modern research laboratory, located 65 miles from Los Angeles, needs men in Missile and Military equipment systems analysis and design.

Contact your Placement Officer for further information regarding interview date on your campus or write to one of the above addresses.

chance of obtaining formal credit for such a year of study. In many countries there is no clear distinction between graduate and undergraduate courses, so it may prove impossible to obtain credit toward an advanced degree for the work taken during this year. Thus, unless you are willing to delay your graduate program for a year you would be ill-advised to apply for a Fulbright. But if you are willing to postpone your formal graduate studies, I can certainly think of no better way to "waste a year" academically.

Since the applications must be submitted in November, I would like to urge all members of the class of '58 to seriously consider applying for one of these scholarships, and to decide on which country they would like to apply for. I would certainly be happy to talk to anyone interested in applying for Germany.

John Domingo '55

#### Calling all patent lawyers

New York City, N.Y.

Sir:

I have often wondered how many Caltech alumni are patent lawyers. I only know of about four, but there must be others, and I thought we might attempt a get-together during some future meeting of patent lawyers—as, for example, during the patent meetings of the Practicing Law Institute.

Dudley B. Smith '45 Cluett, Peabody & Co., Inc. 530 Fifth Avenue New York 36, N.Y.

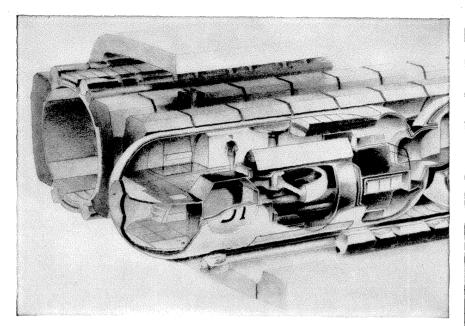

The Alumni Association has these additional names on file as patent lawyers. Anyone else who wants to be included in this list can get in touch with the Alumni Office.

William J. Elliott '45 Elliott & Pastoriza Santa Monica, Calif.

ENGINEERING AND SCIENCE

## MARS outstanding design SERIES

### man and motion:

The wonders of the future are still little whispers in men's minds, or maybe — like Detroit Designer Norman James' magnetically suspended inter-city train - a drawing on a piece of paper. Traveling in a vacuum in an air-tight tube, it floats in space, held by a system of magnets built into cars and tunnel. Propelled electrically by "rolled-out" motor, train acts as rotor, tunnel roof as stator. Converter aboard train changes light projected through windows into electrical energy.

No one knows which ideas will flower into reality. But it will be important in the future, as it is now, to use the best of tools when pencil and paper translate a dream into a project. And then, as now, there will be no finer tool than Mars-sketch to working drawing.

Mars has long been the standard of professionals. To the famous line of Mars-Technico push-button holders and leads, Mars-Lumograph pencils, and Tradition-Aquarell painting pencils, have recently been added these new products: the Mars Pocket-Technico for field use; the efficient Mars lead sharpener and "Draftsman's" Pencil Sharpener with the adjustable point-length feature; and — last but not least — the Mars-Lumochrom, the new colored drafting pencil which offers revolutionary drafting advantages. The fact that it blueprints perfectly is just one of its many important features.

> The 2886 Mars-Lumograph drawing pencil, 19 degrees, EXEXB to 9H. The 1001 Mars-Technico push-button lead holder. 1904 Mars-Lumograph Imported leads, 18 degrees, EXB to 9H. Mars. Lumochrom colored drafting pencil, 24 colors.
