

AN OPPORTUNITY TO GROW IN THE HIGHEST PROFESSIONAL WORKING ENVIRONMENT...

MITRE designs and develops systems that enable our military commanders to detect attack and retaliate instantly. Typical systems include Nuclear Detection and Reporting Systems, North American Air Defense Combat Operations Center and Back Up Interceptor Control System. MITRE is also experimenting with techniques for future air traffic control systems.

For the young systems engineer there is no more rewarding work. You associate with the top men in your field. You work in an atmosphere that allows you to extend your capabilities professionally and academically.

At MITRE, men trained in single disciplines are encouraged to grow beyond their original fields of interest. Systems designers learn to work from an increasingly broad base. You may work in such diverse areas as information theory, computer design, display techniques, propagation, or human engineering. You may analyze. You may synthesize. You may deal with systems or components. At the highest levels, you may have to consider political, economic and social factors... as well as the predictable technology. Minimum requirements, B.S., or M.S., or Ph.D. in these disciplines: electronics, physics, and mathematics. MITRE is located in pleasant, suburban Boston. Rewards are competitive. Write, in confidence, to Vice President—Technical Operations, The MITRE Corporation, P.O. Box 208, Dept. CTE 2, Bedford, Mass.

THE
MITRE
CORPORATION

MITRE, an independent nonprofit corporation, working with — not in competition with — industry, serves as technical advisor to the Air Force Electronic Systems Division, and is chartered to work for such other Government agencies as the Federal Aviation Agency.

Alumni News

Alumni Dinner Meeting

Albert Ravenholt, of the American Universities Field Staff, spoke on Communist China at the Alumni winter dinner meeting on Thursday, January 10, at the Rodger Young Auditorium.

A correspondent during World War II and a specialist in Southeast Asia affairs, Mr. Ravenholt has been with AUFS for the past 12 years. His discussion recounted the establishment of the Communist regime in China, and told frankly of its efforts to build an industrial nation, of the growth and decline of the communes, of the failure of the "Great Leap Forward," of widespread malnutrition and famine, of the deterioration in the industrial programs. The prepared talk was followed by a lively question-and-answer period. Mr. Ravenholt was introduced by Dr. Edwin S. Munger, Professor of Geography.

The Alumni program includes plans for meeting with other AUFS representatives later this year.
